

Pistol B210 - Gepard

DESCRIPTION

The gun is made of high quality materials that it provides the high reliability and long life.

The handle of the gun was prepared, forging, high quality aluminum alloy, which reduces the weight of the gun and retained high resistance.

Barrel of a gun is formed from a material that are specially developed for the production of pipes of firearms. Inner tube route is hard chrome plated and also has chrome and outer surface of the pipe c "style is achieved by high resistance to wear and corrosion resistance.

The cover is done in one monoblock forged of high quality steel and is one of the secure element in the exploitation of the gun. All highly dynamic burdened parts were done by RWR Poldi steel that is specially designed for dynamic strained parts (firing pin, trigger Osvin, and others).

By proper selection of quality materials and reliable design solutions applied achieved century guns over 30,000 rounds fired.

The gun with its design and technical solutions is a modern gun with excellent performance in its class.

SPECIFICATION

Caliber	Total length (mm)	Height (mm)	Barrel length (mm)	Weight, with magazine (g)	Capacity (rounds)	Operating temperature (°C)	Reliability (rounds)
9mm Luger	190	140	108	915	15/18/20	-50 to 60	30.000
40 S&W	190	140	108	915	15/18/20	-50 to 60	30.000
